

The smart solution for termite and general pest control inside and out.

FMC's new Biflex Aqua provides professional pest controllers with all the benefits of Biflex in a water-based formulation that is practically odourless.

Registered for indoor and outdoor use, this revolutionary product offers unparalleled flexibility, user friendliness and superior internal/external termite and insect control.

Features	Benefits **
Nil odour	Satisfied customers
Water based formulation	Safe around the home
Non-sensitising	Operator comfort
Long residual call backs	Proven control =>less
Broad label	Indoor /outdoor use
Developed by FMC	High performance / quality product
Even Soil Distribution	Confident Termite application

**When used according to label directions

Water based technology

Biflex Aqua is a high quality suspension concentrate formulation that, when diluted in water, displays unsurpassed durability. When applied, Biflex Aqua is not absorbed into the treated surface but sits on top, where it has maximum effect on insects and won't wash or brush off.

The water-based product has no odour and produces no airborne residues. It is also highly insoluble in water and binds strongly to surfaces, so it won't leach or be easily removed by rain, sprinkling, hosing or irrigation.

High performance active ingredient

The secret behind Biflex Aqua is bifenthrin, the only biphenyl pyrethroid available to Australia's professional pest control industry. Its unique molecular structure enables it to work harder and longer than any termiticide currently on the market.

Biflex Aqua protects with dual action

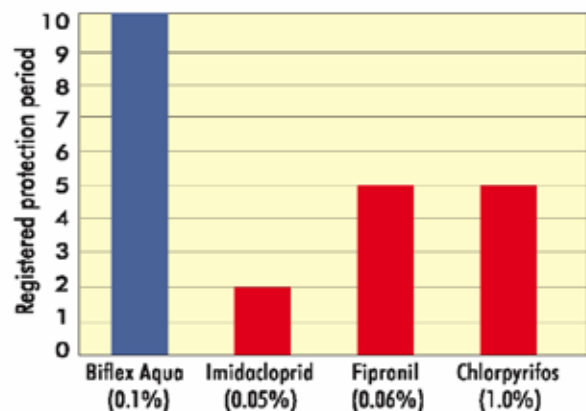

Some termiticides only kill termites when they move towards the home and pass through a chemical barrier. Unlike non-repellent termiticides, Biflex Aqua **repels** termites from crossing the barrier and **kills** them on contact.

Effective against a wide range of pests

Biflex Aqua is a highly flexible product providing control of a range of pests including termites, spiders, papernest wasps, ants, cockroaches, mosquitoes, fleas, flies and ticks.

How effective is Biflex Aqua?

Biflex Aqua when applied as a termiticide has the longest residual protection of any competitive product (as approved by the Australian Pesticides and Veterinary Medicines Authority for termite control south of the Tropic of Capricorn in exposed situations).

The Biflex® Aqua Advantage

Friendly formulation

- Reduced skin irritation.
- It is safe to apply on lawns, plants and shrubs, painted surfaces, tiles and timber. However, since Biflex Aqua is toxic to fish, take care when applying it near water.
- It is effective at low rates so you'll use less and leave less active ingredient in the environment.

One product does it all

- It mixes readily in water and can be applied with any conventional pest control spray equipment.
- Broad labels allow for both termite work and indoor/outdoor control of general household pests.
